
Exact finite-lattice CL check — no claim of PRL reproduction
Two cells, stabilization off
CL height − exact height
Langevin time step
E=0
E=25
E=100
Monovalent C, cell 0
CL counterion density − exact density
Langevin time step
Drift tail (dt=0.005)
Empirical survival probability
Maximum bare drift
Partition cancellation (dt=0.005)
Empirical survival probability
−log10(min |Q(W)| / Q(Re W))
